PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years of experience building scalable web platforms, APIs, and HR/payroll systems. Dual-employed at Hans and Cadi (lead maintainer for PHP school portals serving 40,000+ students) and Reposebay HR (backend lead on Legal Hub and Joseph Castle). Strongest in Laravel/PHP, Livewire, MySQL, REST API design, and backend-heavy product systems. Also experienced across React/Inertia, Vue, Next.js, Flutter/Dart, and embedded Arduino/C projects. Comfortable designing complex schemas, writing clean API documentation, optimizing legacy systems, and delivering under tight timelines.

TECHNICAL SKILLS

Backend	Laravel, PHP, Livewire, REST API design, Laravel Passport, Socialite, queues, schedulers
Frontend	React, Inertia.js, Vue.js, Next.js, JavaScript, TypeScript, HTML5, CSS3
Mobile	Flutter, Dart
Database	MySQL, PostgreSQL, SQLite — schema design, query optimization, N+1 resolution
Testing	Pest, PHPUnit, Laravel Pint, PHPStan
Documentation	Swagger / OpenAPI, API handoff docs, technical guides
Tools	Git, GitHub, Firebase, Linux, cPanel, shared hosting workflows
Embedded / IoT	Arduino, C — sensor/actuator control, Flutter control interfaces

PROFESSIONAL EXPERIENCE

Full Stack Developer

January 2024 – Present

Hans and Cadi · Kaduna, Nigeria

- ▶ Lead maintainer for legacy PHP school portals serving 40,000+ active students across multiple tertiary institutions.
- ▶ Optimized legacy systems by redesigning data storage, adding pagination, and eliminating N+1 query issues — improving performance by 60%+ and reducing bandwidth usage by 50%.
- ▶ Led development and deployment of HR/payroll systems for federal polytechnic environments: configurable salary structures, PAYE, pension, NHF, cooperative deductions, and full personnel lifecycle workflows.
- ▶ Designed secure Laravel backend workflows with Eloquent, validation layers, and structured database models.
- ▶ Mentored junior developers on Laravel patterns, backend best practices, and practical debugging.

Backend Developer

August 2025 – Present

Reposebay HR · Remote

- ▶ Backend lead on Legal Hub — RESTful APIs for client/lawyer workflows, document approvals, messaging, payment flows, wallet operations, and payout methods.
- ▶ Implemented authentication enhancements, pagination standards, and Swagger/OpenAPI documentation for partner and frontend consumption.

- ▶ Worked on Joseph Castle backend: customer orders, dispatches, invoices, reconciliation, customer funding, finance workflows, audit flows, and admin controls.
- ▶ Built backend API services for an e-learning platform covering course delivery, enrollment, payment routing, and role-based access.

SELECTED PROJECTS

DirectPay — *Laravel · MySQL · Queues · CoralPay · Interswitch*

- ▶ Multi-tenant payment operations platform with central-domain and organization-subdomain architecture using separate tenant databases.
- ▶ Implemented payment batch workflows, role-based operations, queue-backed processing, and scheduled reconciliation jobs.
- ▶ Integrated CoralPay and Interswitch gateways with architecture extensible to additional providers.

Legal Hub Backend — *Laravel 12 · Passport · Google OAuth · Swagger*

- ▶ Full API backend for a legal services platform: client, lawyer, and admin flows with Passport authentication and Google OAuth.
- ▶ Built task, document, messaging, notification, wallet, payout, and webhook workflows with structured API resources and transaction logging.

Persons / Works & Persons — *Laravel · Livewire · MySQL*

- ▶ Tenant-aware payroll and personnel platform with salary structures, deductions, allowances, tax, pension, cooperatives, and approval chains.
- ▶ Supported tenant backup/restore commands, migration tooling, merge operations, and payroll consistency workflows.

PayPro HR — *Laravel · React · Inertia.js · Pest · PHPStan*

- ▶ Full-stack HR platform covering leave, approvals, departments, and employee operations.
- ▶ Applied CI-oriented tooling: Pest, Pint, PHPStan, and type checks across the codebase.

Webhook Box — *PHP · SQLite (zero dependencies)*

- ▶ Lightweight developer utility for capturing webhook requests, inspecting headers/payloads, and exporting replayable cURL commands.
- ▶ Deployable on basic PHP hosting with no Composer dependencies.

Automatic Liquid Filling System — *Arduino · C · Flutter*

- ▶ Designed embedded control logic for hardware sensor/actuator automation with a Flutter UI for real-time monitoring and control.

RESEARCH

Automatic Arrhythmia Classification using Deep Learning

- ▶ Processed ECG data from PhysioNet using MATLAB; developed a custom heartbeat detection algorithm achieving 99.55% sensitivity and 99.73% PPV.
- ▶ Benchmarked against Pan-Tompkins — 8× faster on Signal A (1.8s vs 33.2s) and 5× faster on Signal B (0.44s vs 2.4s).
- ▶ Deployed CNN/DNN model on Raspberry Pi Pico via TinyML: 85% accuracy with sub-150ms inference latency on constrained hardware.

EDUCATION

B.Eng in Mechatronics and Systems Engineering

Abubakar Tafawa Balewa University (ATBU), Bauchi

Aug 2016 – Aug 2023

B.Sc in Information Technology

International Open University

Sep 2021 – Apr 2025
